EventEase: Interactive Video Showcase & Walkthrough Guide

Standard Recording Blueprint & Guided Captions Specification | Abdul Wasay Ali Portfolio

1. Project Overview & Objective

This guide outlines the complete blueprint for recording the **EventEase** mobile application demonstration and transforming it into an interactive, synchronized video showcase inside your portfolio. Instead of static screenshots, recruiters will see a dynamic smartphone demo accompanied by real-time English feature captions and clickable timeline chapters, matching modern enterprise design standards.

2. Mobile Recording Recommendations

Parameter	Recommendation	Reason
Target Duration	25 to 35 seconds	Ideal attention span for recruiters & clients
Resolution / Orientation	1080p Portrait (9:16)	Fits natively in 3D mobile mockup container
Pace of Interactions	Calm, deliberate taps (pause ~1s)	Allows captions to sync with user actions
Status Bar & Notifications	Do Not Disturb (Clean screen)	Eliminates visual distractions
Demo Data	Realistic event titles & photos	Highlights UI quality and design aesthetic

3. Recommended Second-by-Second Screen Flow

Timestamp	Screen / Action	English Live Caption (Subtitles)
00:00 - 00:06	Home Feed & Categories	**01. Discovery:** Browsing trending hackathons, tech summits, and local workshops with real-time category filters.
00:06 - 00:13	Event Details & Venue Map	**02. Rich Details:** Inspecting schedules, speakers, venue coordinates, and attendee capacity limits.
00:13 - 00:20	Seat Selection & Booking	**03. Instant Booking:** Dynamic seat allocation synchronized instantly with Firebase Cloud Firestore.
00:20 - 00:26	E-Ticket & Unique QR Code	**04. Digital Pass:** Automated generation of high-resolution cryptographic QR pass for physical venue check-in.
00:26 - 00:32	Organizer Mode / Scanner	**05. Host Workflow:** Switch to organizer mode featuring high-speed optical camera scanner for attendee check-in.

4. Portfolio Web Implementation Features

• **3D Titanium Smartphone Mockup:** Custom CSS phone frame with screen glare, bezels, and speaker punch-hole.
• **Synchronized Subtitles:** Glassmorphism lower-third caption bar that updates automatically as the video advances.
• **Clickable Timeline Chapters:** Interactive badges (e.g., [Feed], [Details], [Booking], [QR Pass]) allowing visitors to jump to any feature.
• **Lightweight Compression:** Video will be converted to modern MP4 (H.264) & WebM formats under 2.5 MB for zero-buffering playback.

> ***Next Step:*** *Record your 25-35 second demonstration following the timeline above. Once saved, share the video file or drop it into the portfolio workspace, and the automated captioning engine and 3D frame will be integrated seamlessly.*
